

EasyBraid

EasyBraid products are used in the rework and repair of printed circuit boards, computers, cell phones, or other electronics assembly.

DESOLDERING BRAID

- Easily remove solder from components or pads on a circuit board
- Concentrated fine copper braiding utilizes less length of wick for each desoldering application
- Made of clean, oxide-free copper wire and tight weave enables quick “on and off” desoldering

STENCIL ROLLS AND WIPES

- Used in SMT (surface mount technology) screen printing lines to keep stencil apertures clear of paste residue during the automatic screen printing process
- Prevents smearing, bridging, solder balls, and other problems associated with the stencil printing of solder paste
- More paper per roll resulting in less down time, change over time and inventory required
- Solvent resistant and increased absorption per square inch

SOLDER TIP CLEANERS

- Solder Sponges or Solder Soakers are manufactured with natural materials, compressed cellulose
- Brass Pads or Brass Curls are manufactured with soft coiled brass
- Removes oxides and excess solders from soldering iron tips
- Provides extended tip life and precise soldering
- Compatible with many different soldering workstands
